

CROMPTON INSTRUMENTS ENERGY METERS

- Blue backlit LCD
- Direct and CT connection
- Accuracy class 1 for active energy and power
- Accuracy class 2 for reactive energy and power
- The standard versions can be combined with communication modules
- Energy registers for import and export
- Instantaneous active and reactive power display
- Sealable terminal covers
- Storage of energy values and configuration digital display (EEPROM)
- Tariff identifier display

CE M12 0051
054 / MID
ECSEM116MID

The MID approved energy meters range is available for single and three phase systems and the range features include a blue backlit LCD screen, direct or CT connection capability, sealable terminal covers, and tariff identifier display. Energy consumption can be remotely monitored via SO pulse outputs or can be communicated with Modbus RS 485 RTU, M-Bus, KNX and SD card datalogger interfaces.

For manufacturers and end-users selling and using measuring instruments intended for trade.

Since October 2006 every meter manufactured and used for electricity billing must be MID approved energy meters or UK legislation approved and as of October 2016 all meters installed for billing must be only MID approved energy meters. Moreover, it is a criminal offence to install a non-approved meter for billing.

The directive also includes the quality management system certification for manufacturers to ensure compliance with the directive to protect the end user who uses the data collected by meters on a daily basis.

[illegible]

DRM ENERGY-METERS SINGLE-PHASE 32A/40A

Features

- Display LCD
- For direct connection 32A
- 7 digits for energy and other values indication
- Accuracy class 1 for active energy and power according to EN 50470-3 (B)
- Operating range current (Ist ... I_{max}) for direct connection 32A = 0.020 ... 32A
- Sealable terminal covers
- The standard versions are designed to be combined with the communication module
- DIN modules wide (18mm)

► Direct connection 32A

The energy-meters use an LCD display to give a clear reading and are used to measure single-phase systems in residential, utility and industrial applications. Monitoring of the energy-consumption is via two SO pulse outputs. The products can be set up to communicate with Modbus RTU, M-Bus, KNX and SD card datalogger interfaces, and thus can be used to analyse energy-consumption in order to reduce to a minimum the running cost for industrial plants and buildings.

Active energy-meters for single-phase alternating current with a, 7 digits counter. These meters have 1 SO output generating pulses for remote processing of the active energy measurements for 1 tariff.

DRM ENERGY-METERS SINGLE-PHASE 80A/125A

Features

- Blue backlit LCD
- Direct connection 80A/125A
- 8 digit display
- Accuracy class 1 for active energy
- Accuracy class 2 for reactive energy
- The standard versions can be combined with the communication modules
- Energy register for import and export
- Sealable terminal covers
- 3 DIN modules wide (52mm)
- Storage of energy values and configuration digital display (EEPROM)
- Tariff identifier display for active and reactive energy.

► Direct connection 80A/125A

These meters are used to measure the energy consumption in single-phase systems in residential, utility and industrial applications, and use a blue backlit LCD screen to give clear readings. Monitoring of the energy-consumption is via two SO pulse outputs. The products can be set up to communicate with Modbus RTU, M-Bus, KNX and SD card Datalogger interfaces, and thus can be used to analyse energy-consumption in order to reduce to a minimum the running cost for Industrial plants and buildings.

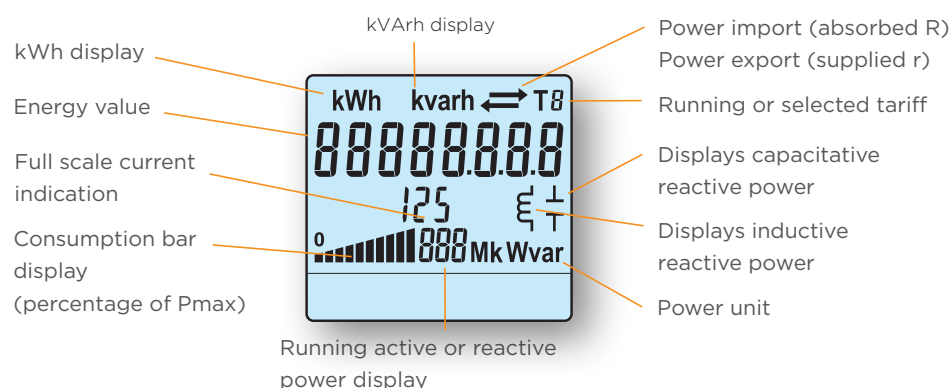

A single phase energy meter with an 8 digit, 2 decimal, display showing the total energy reading. The meters have 2 SO outputs generating pulses for remote processing of active and reactive energy and 2 Tariffs.

DRM ENERGY-METERS THREE-PHASE CT 5A/80A/125A

Features

- Blue backlit LCD
- For direct connection 80A/125A, or for transformer .../5A
- For transformer primary current of 5A to 10.000/5A. Input is in 5A increments
- 8 digits - 8 display for eight energy values indication
- Detection of connection errors (phase transposition)
- Accuracy class 1 for active energy and power according to EN 50470-3 (B)
- Accuracy class 2 for reactive energy and power according to EN 62053-23
- Operating range current (Ist ... I_{max}.) for direct connection 80A = 0.015 ... 80A/125A - 0.020...125A for connection by CT .../5A = 0.003 ... 5A
- The standard versions are designed to be combined with the communication module
- Energy register for import and export
- Instantaneous active and reactive power display
- Sealable terminal covers
- 4 DIN modules wide (72mm) 5A/80A /6 DIN 108 modules wide 125A

- ▶ Direct connection 80A/125A
- ▶ Connection through CT .../5A up to 10.000/5A

Digital meter to register active energy, both imported and exported, and to measure current, voltage, active and reactive power, frequency and power factor, with IR communication side port.

A three phase energy meter with an 8 digit, 2 decimal, display showing the total energy reading. The meters have 2 SO outputs generating pulses for remote processing of active and reactive energy and 2 Tariffs.

Parameters

DRM-80-3P

DRM-5-3P

DRM-125-3P

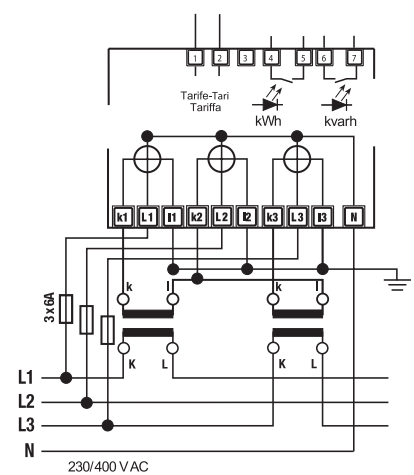

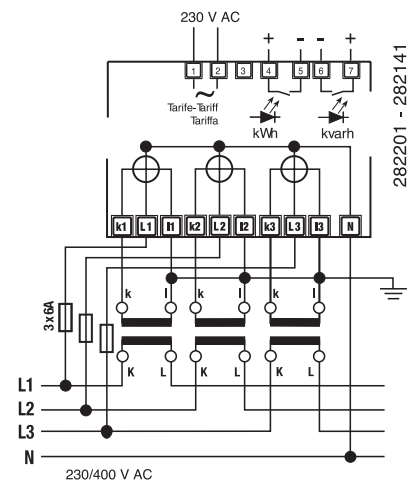

Circuit diagrams

DRM-80-3P

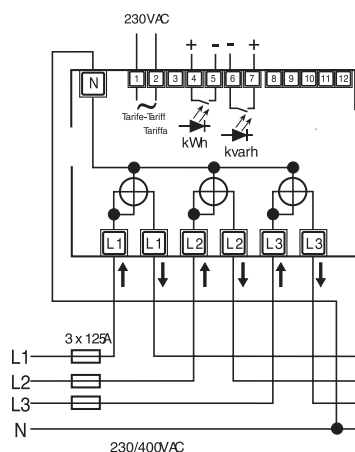

A fuse of 80A is recommended for the line protection.

DRM-5-3P

A fuse of 6A is recommended for the line protection. Current transformers must not be operated with open terminals since dangerous high voltages might occur which may result in personal injuries and property damage. In addition to this, the transformers are exposed to thermal overload.

DRM-125-3P

A fuse of 125A is recommended for the line protection. Wire N needs to be connected to the meter.

MODBUS INTERFACE RTU AND ASCII

Features

- Interface available:
 - type: for energy, power, voltage, current, cos and frequency, etc.
- Modbus Ascii and Modbus RTU protocols
- Suitable for both single-phase and three-phase energy-meter
- 1 DIN module wide (18mm)

Additional communication modules for energy-meter

The product is intended to be placed side by side to an energy meter, equipped with an infra-red port on the side, to collect the measurements data from the instrument and to transmit them via an RS-485 serial line to a remote collection station using Modbus protocol.

The communication module automatically recognizes the instrument connected to its infra-red port and is in the position to transmit all the data provided by the instrument itself.

Configuration

Modbus RTU or Ascii communication protocols are supported. Suitable for both single-phase and three-phase energy-meters. Refer to the technical guide for further information.

Plug and play

The interface is enabled to recognize automatically the instrument connected to its infra-red port. This is an advantage in terms of flexibility, because the same interface can be connected, to single-phase or three-phase energy meters

Measurements

The interface acts as a Modbus slave, so that the transmitted measurements can be collected and displayed using one of the software tools available on the market enabled to act as a Modbus master.

Baudrate

The interface is enabled to operate with a number of baudrates, up to 115200 baud.

The pure speed of transmission is limited by the band capacity which is 9600 baud on the IR interface:

Dimensions

M-BUS INTERFACE

Features

- Interface for energy, power, voltage, current, cos and frequency, etc.
- M-Bus according to EN1434
- Suitable for both single-phase and three-phase energy-meter, network analyser and power-meters
- 1 DIN module wide (18mm)

Additional communication modules for energy-meter

The M-Bus interface (1 module wide, DIN rail mount) is intended for connecting the energy meter to M-Bus. M-Bus is a standard widely used for remote reading of various types of consumption meters and sensors. The interface receives the measurement data from the energy meter by means of the infrared port available on the side of the meter itself, and gets the power supply from the bus, so that only the bus wiring (a two-wire standard telephone cable) must be connected, no additional wiring is required. The interface is suitable for both single-phase and three-phase energy-meter.

Measurements

M-bus interface is for remote reading of all of the energy, power, voltage, current, frequency, power factor registers. Status byte are available as well, containing information about the status of the energy-meter (running tariff nominal, voltage and current range overflow).

Commands

Commands can be sent via M-Bus to the interface for resetting the energy accounts. Commands are enabled only on relevant measuring instruments models.

Cable length M-Bus according to EN13757-2 Annex E Baudrate

- Shielded telephone cable 0.5mm² (0.8mm) (typ. 4x0.8mm)
- NYM-cable (1.5mm² standard cable)

Using telephone cables with an diameter of 0.6mm either the max. length or the number of slaves must be reduced by factor 2!

Cable Length

Type	Installation	Distance (resistive cable length)	Total length of segment wiring	Cable type (diameter)	Number of slaves (unit loads)	max. Baudrate

KNX INTERFACE

Features

- Interface for energy register and power measurements, etc.
- Communication in compliance with KNX standard for home and building control
- Configuration via ETS3
- Energy registers transmitted as float values (EIS9)
- Suitable for both single-phase and three-phase energy-meter
- 1 DIN module wide (18mm)

Additional communication modules for energy-meter

The KNX interface (1 module wide, DIN rail mount) is intended for connecting the energy meter to KNX bus. KNX bus is widely used for home and building control applications. The interface receives the measurement data from the energy meter by means of the infrared port available on the side of the energy meter itself, and gets the power supply from the bus. Only the bus wiring (twisted pair) must be connected, no additional wiring is required. The interface is suitable for both single-phase and three-phase energy-meter.

Configuration

The interface is provided with an application program to be imported in ETS3, in order to allow the configuration of the communication. ETS3 is the standard software for KNX systems configuration.

Measurements

All the active and reactive energy, voltage, current, active, reactive, apparent power, power factor, frequency registers available on the measuring instrument can be transmitted over the bus. Transmission modes are available: transmission on request, automatic transmission based on adjustable energy account increment (for instance a message every 10 KWh). Status bytes are available as well, containing information about the status of the energy meter and the load (load type, running Tariff, energy import or export and so on). (Some measurements and status information are available only on selected models).

Voltage limits

Upper and lower voltage limits can be set via ETS3. A warning message will be sent over the bus by the interface, in case the voltage value goes beyond the limits.

Energy reset

Commands can be sent via bus to the interface for resetting the energy accounts (enabled only on selected measuring instruments models).

1 standard module housing (18mm wide), suitable for DIN-rail mounting 35mm.

Dimensions

SD CARD DATALOGGER

Features

- The SD card memory from 1 to 8 gigabytes
- Suitable for both single-phase and three-phase energy-meter.
- 1 DIN module wide (18mm)

Front Panel

Three green LEDs notify the communication state, the recording state and the SD card:

● • LED blinking

● • LED ON

○ • LED OFF

● • LED irrelevant

- The recording will start within 8 seconds; don't pull the SD card.

- The SD card is full.

- The recording is started; don't pull the SD card.

- Is allowed to pull the SD card.

- Less than 25% of memory is available.

- The IR communication with meter is active.

- No communication is being.

Additional communication modules for energy-meter

The SD card module is DIN-rail-mounting (1 DIN module, 17.5mm); it receives data from an MID approved energy meters through the infra-red interface. Its purpose is to store data (a configurable set of data) coming from the MID approved energy meters with Tapko protocol syntax into a removable SD card. The size of the SD card and the interval period between 2 records storage are also configurable. The power supply is provided by means of a IMQ safety approved DIN rail mounted transformer (1 DIN module, 17.5mm, 230V AC /12V AC - 4 VA).

In case the whole set of data is stored in each record, it is possible to store approx 1.250.000 records per gigabyte. The smaller the number of data per record, the larger the number of records that the module can store inside the SD card. The SD- card can be removed from the module at any time and inserted in a PC with suitable reader to access the saved data. The format is an CSV file.

The SD card is inserted in factory inside its receptacle on the front side of the SD card module. Inside the SD card a configuration file is written, thus allowing the selection of the parameters to be saved, of the rate of recording, etc. In case SD-module detects the presence of an SD card without any configuration file, it assumes that the dimension is 1 Gigabyte, the rate of recording is 5 minutes, the time/date is 00:00:00 01/01/2010 and the set of data is the main energies group. The module can manage SD cards of 1G, 2G, 4G and 8G sizes.

Meaning of LED

I / R-LED is the reference of IR communication with meter. REC-LED blinks for 8 seconds before a registration is performed on the memory. During registration the LED stays continuously on; in this status the memory shall not be extracted from device in order to not ruin the integrity of saved data MEM-LED is normally off and gets turned on in case less of 25% of memory is available When memory is full, LED-REC and MEM blink.

Maximum number of records

If the whole set of data is selected, it is possible to store approximately 1.250.000 records for each gigabyte, and, if the minimum rate (30 seconds) is selected, each gigabyte ensures 3 years and 9 months of storage. If the storage frequency decreases, the SD card filling time increases; for example: selecting the whole set of data and selecting 1 minute, each gigabyte ensures 7.5 years of storage.

DRB ENERGY-METERS THREE-PHASE - BASIC

- ▶ Direct connection 80A
- ▶ Connection through CT .../5A up to 10.000/5A

Digital meter to register active energy, both imported and exported, with 2 SO pulsed outputs for remote monitoring of active and reactive energies on both tariffs.

Digital energy-meters with LCD display measure active energy in three-phase systems in residential, utility and industrial application.

Monitors energy consumption via Modbus RTU or M-Bus communication.

Parameters

DRB ENERGY-METERS THREE-PHASE - BASIC CT 5A/80A

Features

- For direct connection 80A, or for transformer .../5A
- For transformer primary current of 5A to 10.000/5A. Input is in 5A increments
- 9 digits - 4 display for energy values indication
- Detection of connection errors (phase transposition and phase missing)
- Accuracy class 1 for active energy according to EN 50470-3 (B)
- Operating range current (Ist ... I_{max}) for direct connection 80A = 0.015 ... 80A for connection by CT .../5A = 0.003 ... 5A
- Energy register for import and export
- Sealable terminal covers
- 4 DIN modules wide (72mm)

- ▶ Direct connection 80A
- ▶ Connection through CT .../5A upto 10.000/5A

Digital active energy-meter for imported and exported energy - 2 tariffs - 2 SO.

A three-phase active energy meter with a 9 digit, 2 decimal, display showing the total active energy reading. The meters have 2 SO outputs generating pulses for remote processing of active and reactive energy and 2 tariffs.

4 standard module housing, suitable for DIN-rail mounting
Connection through CT .../5A upto 10.000/5A or direct connection upto 80A

DRB ENERGY-METER THREE-PHASE - BASIC CT 5A/80A WITH BUILT-IN COMMUNICATION

Features

- For direct connection 80A, or for transformer .../5A
- For transformer primary current of 5A to 10.000/5A. Input is in 5A increments
- 9 digits for four energy totalized values
- Detection of connection errors (phase transposition and phase missing)
- Accuracy class 1 for active energy according to EN 50470-3 (B)
- Operating range current (Ist ... I_{max}) for direct connection 80A = 0.015 ... 80A for connection by CT .../5A = 0.003 ... 5A
- Energy register "Partial kWh" resettable* for Modbus /M-Bus versions only
- Sealable terminal covers
- 4 DIN modules wide (72mm)

- ▶ Direct connection 80A
- ▶ Connection through CT .../5A up to 10.000/5A
- ▶ Built-in Modbus RTU or M-Bus

Digital meter to register active energy, both imported and exported, with built-in communication of either Modbus or M-Bus allowing remote access to active, reactive power and energies on both tariffs.

A three-phase active energy meter with a 9 digit, 2 decimal-display showing the total active energy reading. The meters have 2 SO outputs and 2 tariffs that are managed through intergral communications on the meter via Modbus RTU or M-bus interface.

NETWORK CONVERTER FOR ENERGY METERS

Features

- Internal Data Storage (2 GB)
- Network connection through RJ45
- Software included within the product (LAN Server)
- Suitable for single-phase and three-phase instruments on RS485 network
- Modbus TCP/IP data protocol
- HTTP support via internet browser
- Static or DHCP based addressing
- Dynamic DNS to maintain a host name, accessible on the internet, without the need for a static IP
- Internal RTC with NTP protocol support
- One LAN server for 31 single or three-phase devices
- Internet browser user interface
- 4 DIN modules wide (72 mm)

Overview

The product collects data from different energy meters on a Modbus (RS-485) network and makes this data available in a variety of network compatible forms.

- Internal data storage
- Access via Modbus TCP/IP network
- LAN Server with internal software

Connectivity

Each energy meter in the DRM and DRB range has a unique (internal) serial number. This allows the DRB-LAN-RS485 product to recognise different products on the RS485 network and access the measured parameters of these products.

Date and time stamp

The DRB-LAN-RS485 product has an internal real time clock (RTC) to support event recording. The product is able to also support date/time synchronisation through NTP protocol.

Data Storage

An internal micro SD-card can store 2 Gigabytes of data from the RS485 network.

The duration of data storage depends on three factors

- Number of parameters recorded from each device
 - Number of devices on the RS485 network
 - The time interval of each parameter
- Example: if all 50 parameters from 5 meters are stored every minute, the 2GB memory capacity is about two years.

Modbus TCP/IP Network

The DRB-LAN-RS485 product can be connected to any 100Mbit LAN network via the RJ45 socket.

LAN Server

The software within the DRB-LAN-RS485 product supports multiple languages and can be accessed using any internet browser connected on the network

LAN Server Security

Access to the LAN Server can only be made with a valid Username and Password.

The product supports two levels of security.

- User - View devices and parameters
- Administrator - Network and device settings

LAN Server Functions

- Verification and selection of every device which is connected to LAN-Server via the RS485 network.
- View and selection of storage parameters, for each device which is connected to the RS485 network.
- Selection of data storage time interval
- Configuration of LAN network and system parameters (for administrators only)
- User management (for administrator only)

Selection and ordering data

Data concentrator - 4 modules DIN

KILOWATT HOUR ENERGY METERS

Features

- High accuracy
- Pulsed output optional
- DIN-rail or panel mounted
- Active energy consumption indication
- Direct connection

Benefits

- Energy efficiency and awareness
- Balanced and safe systems
- No maintenance

Applications

- Switchgear
- Distribution systems
- Generator sets
- Control panels
- Energy management
- Building management
- Utility power monitoring
- Process control
- Secondary metering

Approvals

IEC

An extensive range of DIN-rail and panel mounted Kilowatt hour meters which measure the real consumption of active energy. These instruments are ideal for secondary metering in switchgear, plant instrumentation and process control applications.

These models incorporate an electro-mechanical kWh counter or LCD display with associated electronics within the instrument case. Requiring no maintenance, the kWh energy meters support energy efficiency and awareness whilst ensuring systems remain balanced and safe.

PANEL MOUNTED INTEGRA CI1 ENERGY METER

Features

- Backlit LCD screen
- Bezel depth 6.1mm
- Plug-in output modules
- Programmable CT ratio
- User programmable system configuration
- Phase diagnostic indication
- System running indication
- Removable energy threshold (1%)

Benefits

- Cost effective
- Intuitive navigation
- Easy 'clip-in' panel mounting

Standards

IEC 61326
IEC 61010-1
IEC 62053-21
RoHS Compliant

Parameters

Button	Screen	Parameters
CT	1	CT Ratio
Wh	2	IMPORT Wh
	3	EXPORT Wh
VArh	4	IMPORT VArh
	5	EXPORT VArh
TEST	6	Phase sequence diagnostic

The Integra Ci1 energy meter is specially designed and developed as a cost affected watt hour and VAr hour meter to complement the current Crompton Instruments Ci meter series. The Integra Ci1 self-contained 96mm DIN panel mounted Watt hour, VAr hour meter measures the real consumption of active and reactive energy to Class 1.0 accuracy.

Programmable functions

Integra Ci1 kWh meter provides simple programming to suit single-phase, three-phase three-wire and three-phase four-wire un-balanced system configurations, CT ratio settings and configuration of selected communication options. To prevent unauthorised access to the product configuration settings, all set-up screens offer password protection.

Specifications

Input	
Nominal input voltage	100-289V AC L-N (173-500V AC L-L)
Max. continuous input overload voltage	120% of nominal
Max. short duration input voltage	2 x range maximum (1 second application repeated 5 times at 5 min intervals)
Nominal input voltage burden	< 0.2VA per phase
Nominal input current	5A AC rms
Max. continuous input overload current	120% of nominal
Max. short duration input current	10 x range maximum (1 second application repeated 5 times at 5 min intervals)
Frequency	45-66Hz
Auxiliary	
Operating range	110-400V AC nominal +/- 10% (99-440V AC absolute limits) or 120-350V DC +/- 20% (96-420V DC absolute limits)
Auxiliary burden	5 VA (Max)
Accuracy	
Active energy (Wh)	Class 1 (IEC 62053-21)
Reactive energy (VArh)	+/- 1% of range
Display	
LCD	8 character backlit counter (#####.#) After the maximum reading is reached the digits will return to zero
Output modules (optional)	
Pulsed output relays	1 per module (2 modules fitted per Ci1)
Contact rating	50mA max at 250V AC
Type	Solid state relay
RS485 output module	1 RS-485 communication module (maximum of 1 module fitted per Ci1)
Type	2-wire half duplex
Baud rate	2400, 4800, 9600, 19200, 38400
Enclosure	
Enclosure style	DIN 96 panel mount
Dimensions	96x96x64.1mm (depth behind panel without module 58mm, with module 82.5mm)
Panel cut-out	92x92mm
Panel thickness	1-5mm
Front protection rating	IP52

THREE-PHASE DIN-RAIL KWH ENERGY METERS

Features

- Class 2 accuracy
- Pulsed output
- Selectable CT ratios
- Dip switch settings
- 7-digit mechanical counter
- Insulated CT connections
- Active energy consumption indicator
- 4 DIN module format
- 3 or 4-wire systems

Benefits

- Increased energy efficiency and awareness
- High accuracy
- Balanced and safe systems
- Maintenance free

Applications

- Switchgear
- Distribution systems
- Generator sets
- Control panels
- Energy management
- Building management
- Utility power monitoring
- Process control
- Motor control
- Secondary metering

Approvals

IEC EN 61010-1
IEC EN 61036
EMC and LVD

DRK-3PCT-415

Three-phase 400V CT Connected 5A, Pulse Output, Three- or Four-wire System

This innovative four DIN module kWh energy meter measures the real consumption of active energy to Class 2 accuracy with a resolution of 1kWh displayed via a mechanical counter on the front panel. The module is operated via an internal current transformer with pulsed output optically isolated from the power supply and load.

Specifications

Active energy accuracy	Class 2
Input frequency	50 - 60Hz
Nominal input voltage	400V L-L (230V L-N))
Input voltage tolerance	-15% to +10% of nominal
Nominal input voltage burden	<2.5VA
Nominal input current	5A
Startup current	15mA
Max continuous input current	6A
Nominal input current burden	<2.5VA
Current measurement	Internal current transformer
System CT ratios	5, 10, 25, 50, 75, 100, 125, 150, 200, 250, 300, 400, 500, 600, 800, 1000A
Pulsed output	Opto-isolated
Pulse duration	<100 milliseconds
Pulsed frequency	1 per kWh
Pulse capacity	3 - 30V DC, <20mA
Counter	7-digit mechanical counter
Reading resolution	1 kWh
LED indicator display	Green - power supply Red - active power consumption @ 1 beat per 1/4 kWh Yellow: warning of 1/4 kWh negative
Enclosure material	Class V-0 in accordance with UL94
Compliant with	IEC EN 61010-1, IEC EN 61036, EMC and LVD
Operating temperature	-10°C to +45°C
Storage temperature	-25°C to +70°C
Relative humidity	0 - 95%, non-condensing
Dimensions	4 x DIN modules wide x 87mm high
IP protection	IP20

CONCENTRATOR MODULE FOR KWH ENERGY METERS

Features

- Collects up to 8 pulsed inputs
- Remote monitoring device
- Modbus® protocol
- 8 dip switch settings
- Dual charge rate handling
- Data transit and power indicators
- 4 DIN module format

Benefits

- Pulse collection
- Increased energy efficiency and awareness
- Balanced and safe systems
- Maintenance free

Applications

- Switchgear
- Distribution systems
- Generator sets
- Control panels
- Energy management
- Building management
- Utility power monitoring
- Process control
- Motor control
- Secondary metering

Approvals

IEC EN 61010-1

DRK-485-230

8 Input Remote kWh Energy Consumption Monitoring Device

The DRK-485 concentrator module remotely monitors energy consumption from up to 8 Crompton kWh meters within a 25 metre radius. The device communicates through a Modbus® connection to a computer COM port via a RS485 serial line. Up to 32 concentrator modules can be connected to the RS485 line without the need for signal amplifiers. Up to 247 modules in groups of 32 can be connected when separated by signal amplifiers.

Specifications

Input frequency	50 - 60Hz
Nominal input voltage	230V AC
Input voltage tolerance	-15% to +10% of nominal
Nominal input voltage burden	2VA
Digital communications	RS485 interface Modbus® protocol
Band handling	Dual charge
Baud rate	9600 bits per second
Transmission mode	ASCII
Error detection method	Longitudinal redundancy check
Max number of contactors	Up to 8 input signals (1 and 3-phase)
Pulse input duration	<100 milliseconds
LED indicator display	Green - power supply Red - data transit via RS485
Enclosure material	Class V-0 in accordance with UL94
Compliant with	IEC EN 61010-1, IEC EN 50081-1, IEC EN 50082-1, EMC and LVD
Operating temperature	-10°C to +45°C
Storage temperature	-25°C to +70°C
Relative humidity	0 - 95%, non-condensing
Dimensions	4 x DIN modules wide x 87mm high
IP protection	IP41 to front, IP20 to rear
Operating temperature	-10°C to +45°C
Storage temperature	-25°C to +70°C
Relative humidity	0 - 95%, non-condensing
Dimensions	4 x DIN modules wide x 87mm high
IP protection	IP20

DRK-IP-230-D63

This three DIN module kWh energy meter measures the real consumption of active energy. The module meter has the highest accuracy class (1) with easy wiring, back illuminated LCD display, non-zeroing total counter and partial zeroing counter. This module passes the load cable through the case allowing up 63A direct connection.

Specifications

Active energy accuracy	Class 1 in accordance with CEI-EN 62053-21
Input frequency	50-60Hz
Nominal input voltage	230V AC
Input voltage tolerance	-15% to +10% of nominal voltage
Nominal input voltage burden	<2.5VA
Max input current	63A
Current input Ib	10A
Start-up current	40mA
Nominal input power burden	<2.5VA
Pulsed output	Opto-isolated, open collector
Pulsed voltage	9-24 V DC +/-10% (switchable O/P current 20mA max)
Pulsed duration	100 milliseconds +/-15%
Pulsed frequency	1 per 0.1kWh
Display	LCD 7 + 5-digit
Reading resolution	0.1kWh and/or 0.1MWh (automatic)
LED indicator display	Green - Power supply Red - Flashing @ 10Wh
Enclosure material	Grey RAL 7035 class V-0 in accordance with UL94
Compliant with	IEC EN 62052-11, IEC EN 62053-21, EMC and LVD
Operating temperature	-10°C to +45°C
Storage temperature	-25°C to +70°C
Relative humidity	10% - 90%, non-condensing
Dimensions	3 x DIN modules wide 53.7mm x 87mm high
Max. diameter of through-hole	12.5mm
IP protection	IP51 at front, IP20 at rear

DRK-3P-400-D100

This seven DIN module kWh energy meter measures the real consumption of active energy. The module meter has the highest accuracy class (1) with easy wiring, back illuminated LCD display, non-zeroing total counter and partial zeroing counter. This module passes the load cable through the case allowing up 100A direct connection on a three-phase system.

Specifications

Active energy accuracy	Class 1 in accordance with CEI-EN 62053-21 standard
Input frequency	50 - 60Hz
Nominal input voltage	3 x 230V ac L-N (400V L-L)
Input voltage tolerance	-15% to +10% of nominal voltage
Burden	< 2.5VA
Max input current	100A
Pulsed output	Opto-isolated, open collector type
Pulsed voltage	9-24V dc +/-10% (switchable O/P current 20mA max)
Pulsed duration	100 milliseconds +/-15%
Pulsed frequency	1 per 0.1 kWh
Display	LCD 7 + 5-digit
Reading resolution	0.1 kWh from 0000000.0KWh - 999999.9KWh 1 kWh from 1000000KWh to 9999999KWh (Automatic)
LED indicator display	Green - power supply Red - flashing @ 10kWh Yellow - indicates wrong connection
Enclosure material	Grey RAL 7035 class V-0 in accordance with UL94
Compliant with	IEC EN62052-11, IEC EN62053-21 (2003-03) EMC and LVD
Operating temperature	-10°C to +45°C
Storage temperature	-25°C to +70°C
Relative humidity	10% - 90%, non-condensing
Dimensions	7 x DIN modules wide 125.7mm x 87mm high
IP protection	IP51 at front, IP20 at rear
IP protection	IP20
