Auer Signal

MEDIUM-SIZED, CUSTOMER-ORIENTED, EXPERTS IN OUR FIELD.

Auer Signal is one of the world's leading manufacturers of signalling equipment and is present in over 70 countries today. In over 100 years of Auer Signal company history, the owner-managed family business has been a symbol of long-term partnership, trust and dependability.

Our products are planned, constructed and tested by our development teams. Innumerable test steps ensure the best product quality. Made in Austria: Auer Signal products stand out from the crowd thanks to their innovative in-depth solutions and ingenious engineering.

Seven compelling reasons to choose Auer Signal

1

We develop our own products and production is completed to the highest of industrial standards

2

Every product we create is of exceptional quality

3

We have products for every application — ranging from the premium to the value segment

4

We develop and produce taylor-made signalling equipment

5

Our signalling equipment complies with the required industry standards for use around the world

6

We keep our promises

7

We always deliver on time

Introduction

Signaling products manufactured by Auer Signal are in use worldwide. There are numerous applications for our signalling products in the industrial area and in many different industries. Sometimes due to our meanwhile comprehensive product portfolio you could use even different products for a particular application.

This **Focus Product Manual** shall serve you as Auer Signal distribution partner as guidance **which products could be particularly successful in your market environment respectively which products you should market with higher priority.** The product selection in this manual are Auer Signal products with highest sales figures as they also cover many different applications.

Therefore these products should also be of high interest to your existing and potential clients. If you use this Focus Product Manual as traveling sales manager you can consult about all important products and you will also find at the end of the manual a summary of important and regularly asked technical information for signalling devices.

For making your work even more efficient we have also **added the most important industries and areas of application for each signalling product series.** This provides you with a good indication in which industries a product should be of specific interest.

In case you may need additional support in specific customer projects our team will be glad to support you any time. We have quite some experience with the most versatile requirements and applications and will be glad to provide you with this expertise so that you can successfully participate in technically challenging projects, even with a tailor-made product. Hence never hesitate to let us know about such opportunity.

Thank you and best regards

Peter Brock

Director Marketing & Sales

Signal towers

Modul-Perfect 70 – PC7

Nothing but
perfect.

**CONTACT LOGIC**

- central

ARGUMENT

- leading performance and brightness
- offers all led light/sound features even for special industrial solutions
- leading performance and competitiveness with multi-colour and M12 solutions
- future oriented and advantageous central contacting system

INDUSTRY/APPLICATION

- plant/mechanical/construction engineering
- automation solutions
- electrical wholesale

Modul-Compete 50 – CT5

Competitive Simplicity

CONTACT LOGIC

- central

ARGUMENT

- complete offering of led/incandescent light and sound products
- very competitive price/performance ratio
- excellent performance in dedicated market segment
- future oriented and advantageous central contacting system

INDUSTRY/APPLICATION

- plant/mechanical/construction engineering
- automation solutions
- electrical wholesale

Eco-Modul 70/60/40

the Flexible Allrounder

CONTACT LOGIC

- classic pins

ARGUMENT

- complete offering of led/incandescent/sound products
- available in 3 tower dimensions
- comprehensive and well proven product family
- classic contacting system

INDUSTRY/APPLICATION

- plant/mechanical/construction engineering
- automation solutions
- electrical wholesale

Visual Signalling

Series R

Market Launch April 2020/HMI fair

The LED-Design-
Powerhouse

PRODUCTS

RDC	led steady beacon
RDM	led multi-function beacon
RDMHP	led multi-function beacon High Performance
RMM	led multi-colour beacon
RCDM	compact led multi-function beacon
RCMM	compact led multi-colour beacon

ARGUMENT

- leading performance and product range
- modular system – “1 size fits all”
- visual-audible solutions for all beacon models
- multi-function beacon offers 7 externally switchable operating modes (total 28 modes)
- High Performance model for applications in bright sunlight etc.
- multi-colour beacon offers 7 externally switchable colours
- stand-alone industrial beacon design
- significant reduction of order numbers nevertheless very comprehensive product range

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- for indoor and outdoor applications (IP66)
- electrical wholesale

Series Q

PRODUCTS

QDS / QDM led steady/flashing beacons

QBS / QBM led multi-strobe/multi-function beacons

ARGUMENT

- cubic design very popular beacon range in 2 main sizes
- effective front and lateral signalling/performance
- primarily for wall mount applications
- multi-strobe beacon with 4 strobe modes + steady and flashing patterns
- for indoor and outdoor applications (IP66)
- combinable beacon/beacon and beacon/sounder assemblies (series A/Q)

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- for indoor and outdoor applications (IP66)
- electrical wholesale
- customized models for crane/special vehicle applications

the Bright

Series N

PRODUCTS

NES led steady/flashing beacons

NFS-HP led multi-strobe beacons

NMS-HP led multi-colour beacons (red-yellow-green)

ARGUMENT

- compact led beacons with high performance leds
- switched mode power supply for wide voltage range
- for indoor and outdoor applications (IP65, IP67)
- sophisticated lens design for optimal signalling effect
- comprehensive mounting options

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- customized models for crane/special vehicle applications

the Performer

Series T+U

PRODUCTS

TDC / UDC led steady/flashing beacons

TDF / UDF led multi-strobe beacons

TMW/UMW base for horizontal mounting

TMV/UMV base for vertical mounting

ARGUMENT

- Ø 75mm and Ø 60mm medium/
smaller size led beacons
- excellent brightness and signalling effect
- for indoor and outdoor applications (IP66)
- wide range of mounting options

INDUSTRY/APPLICATION

- for industrial and general applications
in practically all industries
- electrical wholesale
- door, access and gate applications

the Allrounder

Series P

PRODUCTS

PCH / PCL led steady/flashing beacons

PFH / PFL led multi-strobe beacons

PMH led multi-colour beacons

ARGUMENT

- Ø 75mm led beacons, pre-wired
with 1m PUR cable
- high IP66/67 IP rating
- for challenging outdoor applications
- excellent brightness and signalling effect
- pre-mounted stainless steel
mounting screws
- horizontal, vertical and pole mounting
options

INDUSTRY/APPLICATION

- for industrial and general applications
in practically all industries
- for difficult outdoor or special vehicle
applications

the Tough

Series M22

PRODUCTS

IBS/IBM/IBL led steady/flashing panel mount beacons

ISS/ICM/ICL led multi-strobe panel mount beacons

ARGUMENT

- Ø 30/45/65 mm led panel mount beacons
- IP65 in panel mount condition
- light functions externally switchable via terminal
- excellent front/side signalling effect
- dual and triple colour models also available
- excellent price/performance ratio

INDUSTRY/APPLICATION

- for industrial and general applications
- for switch cabinet/panels and enclosures
- for versatile applications in practically all industries

Series T+U

PRODUCTS

TDCP / UDCP led steady/flashing panel mount beacons

TDFP / UDFP led multi-strobe panel mount beacons

the Allrounder

ARGUMENT

- Ø 75/60 mm larger led panel mount beacons
- high IP66 rating in panel mount condition
- light functions externally switchable via terminal
- excellent lateral and front signalling effect
- very good price/performance ratio

INDUSTRY/APPLICATION

- for industrial and general applications
- for switch cabinet/panels and enclosures
- for gate, access control applications

Audible Signalling

Series A

the Mighty

ARGUMENT

- cubic design very popular sounder range in 3 main sizes
- 8, 32 or 63 tones selectable depending on model
- up to 3 tones externally switchable
- primarily for wall mount applications
- for indoor and outdoor applications (IP66)
- combinable sounder/beacon and beacon/sounder assemblies (series A/Q)

PRODUCTS

ASS-P / ASS-T	multi-tone alarm sounders, max. 103/108 dB
ASM	multi-tone alarm sounders, max. 113 dB
ASL	multi-tone alarm sounders, max. 120 dB

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- for indoor and outdoor applications (IP66)
- electrical wholesale
- customized models for crane and other applications

Series T

PRODUCTS

TDE	piezo buzzer with high IP rating
-----	----------------------------------

ARGUMENT

- Ø 75mm mid-size piezo buzzer with max. 100 dB sound pressure
- continuous and pulsing tones externally switchable
- very high IP66 rating even for difficult outdoor applications
- wide range of mounting options
- can be combined with any T-series beacon model

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- electrical wholesale
- door, access and gate applications

the Allrounder

Series M22

PRODUCTS

ESK / ESV	panel mount buzzers Ø 30 mm, max. 65/85 dB (A) in 1m
ESM / ESG	panel mount buzzers Ø 45 and 65 mm, max. 100/105 dB (A) in 1m

ARGUMENT

- IP65 in panel mount condition
- 2 respectively 3 tone types externally switchable
- sound pressure infinitely adjustable (ESM/ESG), even in panel mount condition
- excellent price/performance ratio

INDUSTRY/APPLICATION

- for switch cabinet/panels and enclosures
- for versatile applications in industrial/general applications

Visual-Audible Signalling

Series A+Q

ARGUMENT

- cubic design very popular sounders with same size led beacons in 3 main sizes
- 8, 32 or 63 tones selectable depending on model
- up to 3 tones externally switchable
- led steady/flashing or led multi-strobe beacons
- effective front and lateral signalling/performance
- primarily for wall mount applications
- for indoor and outdoor applications (IP66)
- sounders with 1 or more beacons combinable
- lower cost options with integrated small beacons/buzzers available as well: ADS-P/ADS-T, ADM/ACM, QSS/QCS, QSM/QCM

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- for indoor and outdoor applications (IP66)
- electrical wholesale
- customized models for crane/special vehicle applications

the Mighty &
the Bright

PRODUCTS

ASS-P/ASS-T + QDS/QBS	multi-tone alarm sounders + Led beacons
ASM + QDM/QBM	multi-tone alarm sounders + Led beacons
ASL + QDL/QBL	multi-tone alarm sounders + Led beacons

Series R

Market Launch April 2020/HMI fair

PRODUCTS

RDC+RBA	led steady beacon with audible base
RDM/RCDM+RBA	led multi-function beacons with audible base
RMM/RCMM+RBA	led multi-colour beacons with audible base

ARGUMENT

- combination of R- series beacons with multi-tone alarm sounder
- leading performance both visual and audible
- 32 tones selectable, 3 tones externally switchable
- up to 103 dB (A) infinitely adjustable sound pressure
- high IP66 rating for outdoor and indoor applications

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- for indoor and outdoor applications (IP66)
- electrical wholesale

The LED-Design-
Powerhouse

Series T

PRODUCTS

TDC+TDE	led steady/flashing beacons + piezo buzzer with high IP66 rating
TDF+TDE	led multi-strobe beacons + piezo buzzer with high IP66 rating
TMW/TMV	bases for horizontal/vertical mounting

ARGUMENT

- Ø 75mm medium size led beacon range with high IP piezo buzzer,
- excellent brightness and signalling effect
- continuous and pulsing tones, max. 100 dB (A) in 1m
- high IP66 rating for indoor and outdoor applications
- wide range of mounting options

INDUSTRY/APPLICATION

- for industrial and general applications in practically all industries
- electrical wholesale
- door, access and gate applications

the Allrounder

Series M22

PRODUCTS

ELM	panel mount buzzers Ø 45 mm with led beacon, max. 98 dB (A) in 1m
ELG	panel mount buzzers Ø 65 mm with led beacon, max. 103 dB (A) in 1m

ARGUMENT

- standard models with synchronized tone and light
- (continuous tone/led steady light – pulsing tone/led flashing light)
- high IP65 rating in panel mount condition
- sound pressure infinitely adjustable even in panel mount condition
- excellent price/performance ratio
- optional models available with separately switchable tone and light

INDUSTRY/APPLICATION

- for switch cabinet/panels and enclosures
- for versatile applications in industrial/general applications too

the loudest &
brightest installable

General technical information

Degrees of protection

The degrees of protection set out by standard EN 60529 provide information about the level to which electrical equipment – in our case signalling devices – is protected against the effects of solid foreign objects and against the ingress of liquid by the casing or covers.

The degrees of protection are indicated by a code which always consists of the two letters 'IP' plus two numbers that represent the level of protection. The most common degrees of protection given to Auer Signal products are IP 65, IP 66 and IP 67.

The table below provides an overview of what the IP degree of protection numbers mean and how they are put together:

First number

Protection against foreign objects

0 NO PROTECTION
No special protection stopping people directly touching active or moving parts; no protection for the equipment against the ingress of solid foreign objects

1 PROTECTION AGAINST LARGE FOREIGN OBJECTS
Protection against the ingress of solid foreign objects with a diameter of more than 50 mm, e.g. hands

2 PROTECTION AGAINST MEDIUM-SIZED FOREIGN OBJECTS
Protection against the ingress of solid foreign objects with a diameter of more than 12 mm, e.g. fingers

3 PROTECTION AGAINST SMALL FOREIGN OBJECTS
Protection against the ingress of solid foreign objects with a diameter of 2.5 mm, e.g. tools, wires

4 PROTECTION AGAINST GRANULAR FOREIGN OBJECTS
Protection against the ingress of solid foreign objects with a diameter of more than 1 mm, e.g. fine tools, small wires

Second number

Protection against liquid

0 NO SPECIAL PROTECTION

1 PROTECTION AGAINST DRIPPING WATER – FALLING VERTICALLY
Dripping water falling vertically should not have a harmful effect

2 PROTECTION AGAINST DRIPPING WATER – FALLING AT AN ANGLE
Dripping water falling at any angle up to 15 degrees to the vertical should not have a harmful effect.

3 PROTECTION AGAINST SPRAYING WATER
Dripping water falling at any angle up to 60 degrees to the vertical should not have a harmful effect

4 PROTECTION AGAINST SPLASHING WATER
Water splashing against the equipment from all directions should not have a harmful effect

5 PROTECTION AGAINST DUST DEPOSITS

Fully protected against dust deposits:
The ingress of dust is not completely ruled out, but does not impair the functionality of the device

6 PROTECTION AGAINST INGRESS OF DUST

Fully protected against the ingress of dust

5 PROTECTION AGAINST WATER JETS

A jet of water from any direction should not have a harmful effect

6 PROTECTION AGAINST FLOODING

A harmful amount of water should not enter the equipment in the event of temporary flooding

7 PROTECTION IN THE EVENT OF IMMERSION

A harmful amount of water should not enter the equipment when it is immersed in water under the specified pressure and time conditions

8 PROTECTION IN THE EVENT OF DEEP IMMERSION

A harmful amount of water should not enter the equipment when it is immersed under water

Standards and certification marks

UL CERTIFICATION

Given that Auer Signal has a global market presence, the majority of the company's signalling equipment is also certified in line with UL standards.

Plus, as a member of the 'Client Test Data Program', Auer Signal is also authorised to conduct UL-related tests in its own laboratory. UL accepts the results of such tests on a provisional basis, but then periodically repeats the tests to check the quality of the results.

UL is the locally established certification for devices specifically on the US market. Although UL certification is not a fixed requirement in particular outside of America, a user of a device with UL certification can be sure that it meets incre-

dibly stringent safety standards because UL has a stronger focus on safety-related aspects than European standards.

As part of UL certification, devices have to be tested by qualified testers and inspectors are sent out to device manufacturers four times a year under the scope of follow-up services to ensure that the prescribed manufacturing methods and material specifications are being upheld.

If the UL mark is preceded by the letter C, it indicates that the device has also been tested in line with the standards set out by the CSA (Canadian Standards Association) and has also been certified for use in Canada."

The list below provides an explanation of the device classifications according to UL:

Type 1

Indoor use primarily to provide protection against contact with the enclosed equipment and against a limited amount of falling dust/dirt

Type 4X

Either indoor or outdoor use to provide a degree of protection against rain, splashing water and hose-directed water; the device is undamaged by the formation of ice on the enclosure; resists corrosion

Type 2

Indoor use to provide a degree of protection against a limited amount of water and dust

Type 6

Indoor or outdoor use to provide a degree of protection against entry of water during temporary submersion/flooding at a limited depth; the device is undamaged by the external formation of ice on the enclosure

Type 3

Outdoor use to provide a degree of protection against windblown dust and rain; the device is undamaged by the formation of ice on the enclosure

Type 12

Indoor use to provide a degree of protection against dust, dirt, fibre flyings, dripping water and external condensation of non-corrosive liquids

Type 3R

Outdoor use to provide a degree of protection against rain; the device is undamaged by the formation of ice on the enclosure

Type 13

Indoor use to provide a degree of protection against lint, dust seepage, external condensation and spraying of water, oil and non-corrosive liquids

Type 4

Either indoor or outdoor use to provide a degree of protection against rain, splashing water and hose-directed water; the device is undamaged by the formation of ice on the enclosure

Luminous intensity

In the field of signalling technology, there are different basic quantities that are used to evaluate light. The main standard units of measurement are lumen, candela and lux.

LUMEN [LM] - LUMINOUS FLUX

Luminous flux is a measure of the total visible light emitted by a light source. It expresses how much light is emitted by a light source in all directions. This value is weighted according to human spectral perception. Luminous flux is an excellent way of expressing how effective a light source is.

CANDELA [CD] - LUMINOUS INTENSITY

Luminous intensity expresses the light emitted in a certain direction. As the emission characteristics of visual signalling equipment are determined by the design of the lenses as well as by the light source, luminous intensity is ideally used to characterise the signalling effect of visual signalling equipment.

$$\text{luminous intensity [cd]} = \frac{\text{luminous flux [lm]}}{\text{Solid angle [sr]}}$$

Luminous intensity expresses the light emitted in a certain direction. As the emission characteristics of visual signalling equipment are determined by the design of the lenses as well as by the light source, luminous intensity is ideally used to characterise the signalling effect of visual signalling equipment.

LUX [LX] - ILLUMINANCE

Illuminance is a measure of the brightness with which a surface is illuminated. Illuminance expresses the amount of luminous flux from a light source that is incident on a receiving area per area unit.

$$\text{Lux [lx]} = \frac{\text{luminous flux [lm]}}{\text{Area [m}^2\text{]}}$$

Audible signalling equipments differs in its

^{1.} volume, ^{2.} tone & frequency.

In industry, international safety standards regulate the appropriate installation of audible signalling equipment. These standards set out the requirements and areas of application of audible signalling equipment.

As a manufacturer of audible signalling equipment for the international market, Auer Signal has many years of experience gained from working on numerous projects in a range of different countries. If you have any questions, please don't hesitate to contact us – we will be happy to help you.

AN OVERVIEW OF SOME KEY REGULATIONS

The sound pressure level of an audible signalling device must be at least 15dB higher than the ambient sound level.

The frequency at which the signal is loudest must differ as much as possible from the frequency of the ambient sound.

The tone frequency of the audible signalling device must be between 300 and 3000Hz.

HOW EFFECTIVE AN AUDIBLE SIGNALLING DEVICE IS WILL DEPEND ON

- The sound pressure level in decibels (dB)
- The tone frequency in hertz (Hz)
- The distance between the signalling device and the receiver
- The influence of other sources of interference and ambient noise

The quantifiable factors, such as the sound pressure in decibels (dB) and tone frequency in hertz (Hz), are disclosed for all audible signalling equipment from Auer Signal. The sound pressure level specified for Auer Signal audible devices will have been measured in an anechoic chamber at a distance of 1m.

Pulsing and alternating tones are more effective than continuous tones.

1. Volume

The volume of an audible sound or signal is relative. Although an increase in the sound pressure of 3dB means that the sound energy has doubled, the human ear only senses that the volume has doubled when there has been an increase of 10dB. Our sense of hearing can therefore be said to work on a logarithmic scale.

As well as the absolute volume of a signal, the perceived volume is also determined by the distance between the sounder and the person.

When this distance is doubled, this equates to a 6 dB decrease in the sound pressure. The signal is then perceived to be about 25% quieter. The following range table can be used as a basis for estimating the sound level. These values only serve as a guideline, however, as environmental factors such as wind speed, wind direction, humidity and weather conditions do also have an effect on audible signals.

**WHEN THE DISTANCE IS DOUBLED,
THE SOUND PRESSURE DROPS BY 6 DB**

Distance[m]	Sound pressure level dB (A)																					
1	65	70	75	80	85	90	92	94	96	98	100	102	104	106	108	110	112	114	116	118	120

500							38	40	42	44	46	48	50	52	54	56	58	60	62	64	66	

Audible signalling equipment from Auer Signal is in the range between **60 dB and 127 dB**.

Talking:

50 dB

Jet:

120 dB

Pain threshold:

130 dB

2. Tone and frequency

Audible signalling equipment produces different tones at different frequencies.

Electronic sounders and multi-tone alarm sounders

In electronic sounders from Auer Signal, the audible signal is generated electronically by a microprocessor, before being enhanced and then emitted by a loudspeaker. In smaller devices, sound capsules are used as loudspeakers, whilst pressure chamber or traditional loudspeakers are deployed in more powerful devices.

A wide range of tones and frequencies can be produced.

ASX
Electronic multi-tone alarm sounders

Given that the audible signal is generated electronically, electronic sounders from Auer Signal can produce a wide range of different tones and frequencies. The advantage of this is that there is a huge choice of tones available, meaning that several clearly distinguishable signals can be assigned to different meanings or areas of application. There is also the option of implementing special customer-specific solutions for tones.

As well as the tone, the volume of the electronic sounders/multi-tone alarm sounders can also be individually adjusted in the majority of the devices supplied by Auer Signal.

Piezo buzzers

Piezoelectric crystals change shape when voltage is applied. Use is made of this property, with piezoelectric crystals being attached to a brass disc and voltage being applied at short intervals. This causes the crystal to vibrate against the disc and generate noise, with frequencies of up to 4000Hz being reached.

If a special design measure based on the resonance principle is taken, extremely high sound pressures can be reached using this method.

Piezo buzzers afford the advantage that extremely high sound pressure levels can be produced despite a compact design, low energy consumption and relatively cost-effective price.

ESG AND ESV
High-volume panel-mount buzzers for control cabinets, etc. in different sizes

Small size, extremely high sound pressure and low energy consumption.
